## BPM Goals

Analyze, design, execute and re-engineer business processes

Make business processes more efficient and effective: deliver more value for less cost

Fabio Casati

3 / 27

## Success

Successful organisations hire and reward the **best people** and explicitly manage and continuously **improve their processes**

## Processes

Processes are what organisations do

Every external interaction triggers a process

Every internal action involves a process

## Dysfunctional?

What is my process?

What is the goal of my process?

How do I measure my success?

How does my manager measure it?

What works? What does not work? Why?

How to improve?

---

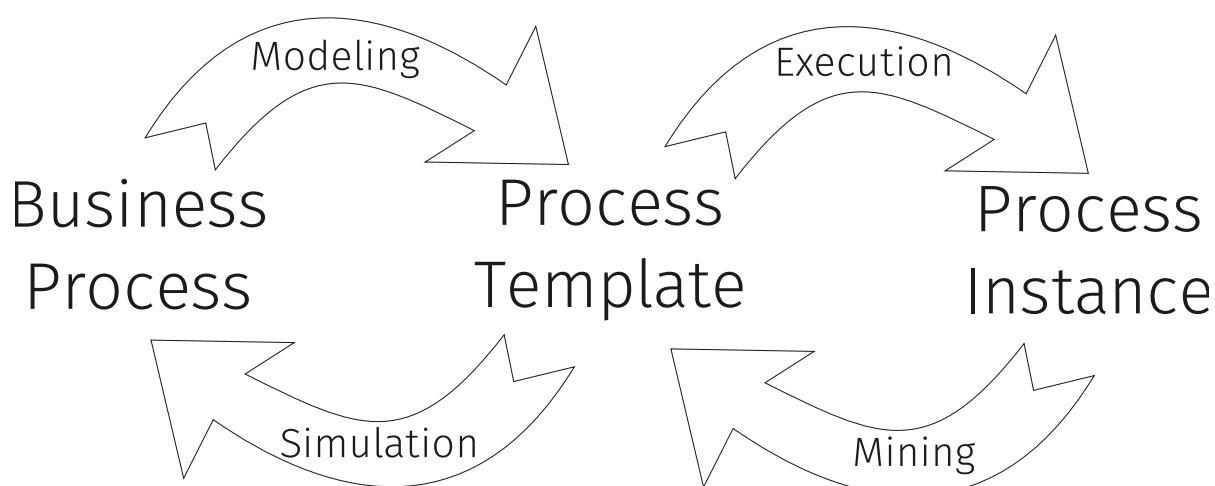

You are working for a dysfunctional organization if you cannot answer these questions.

## Who does what when

1. Resources, People, Operators, Software Systems
2. Activities, Tasks, Operations, Steps
3. Processes, Coordination, Control and Data Flow

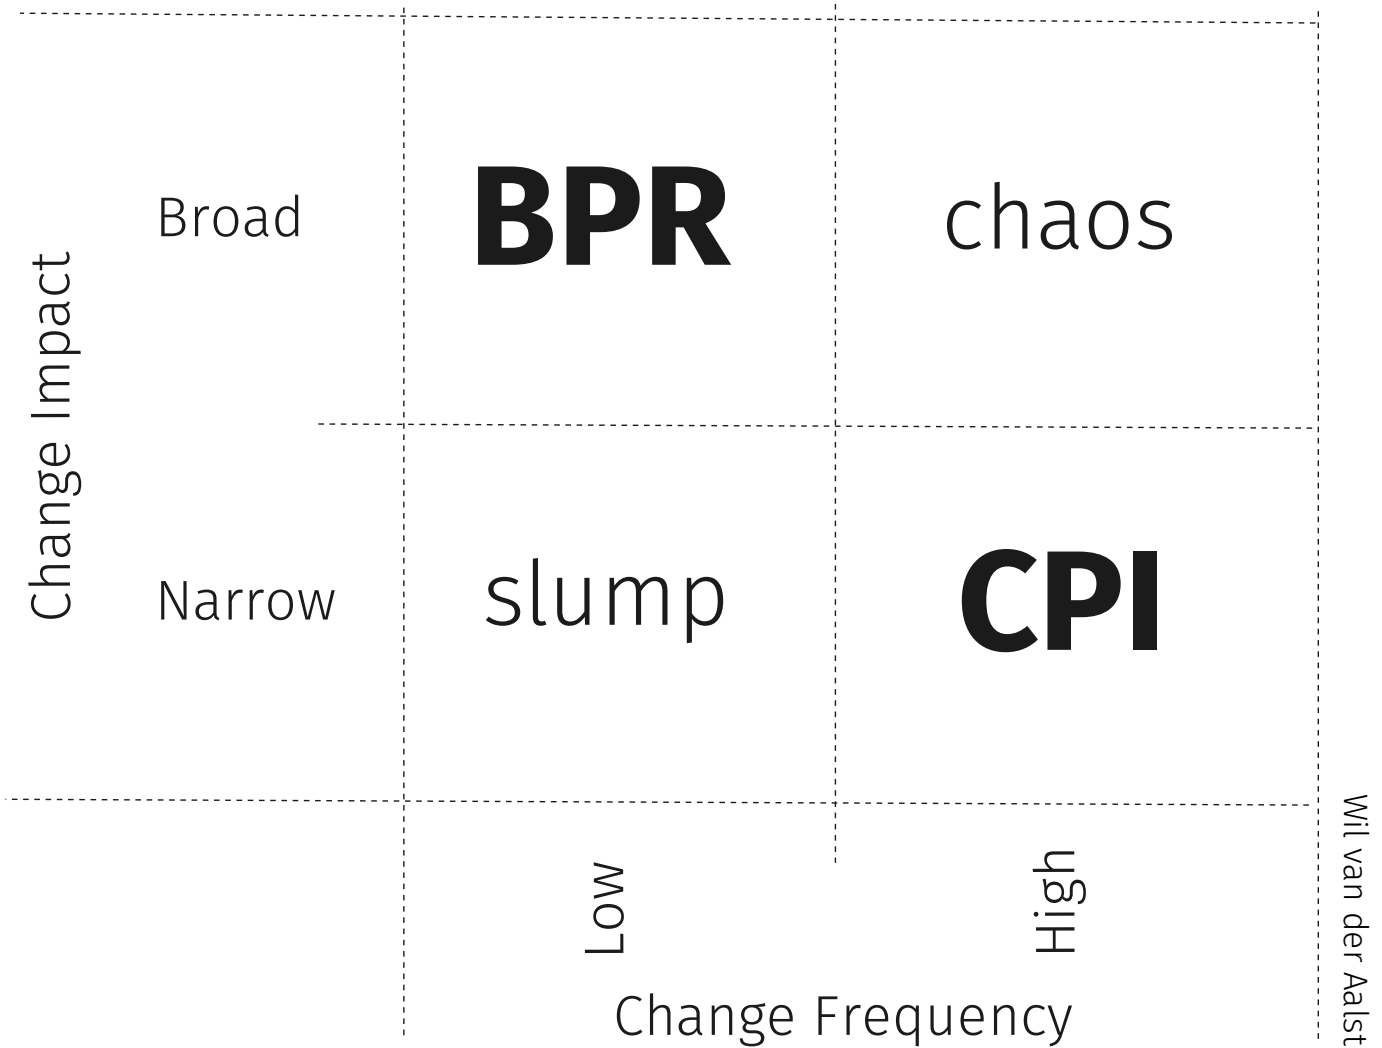

## Workflow

The automation of a business process where **documents**, information to be processed or **tasks** to be carried out are passed from one **participant** to another following a set of procedural **rules**

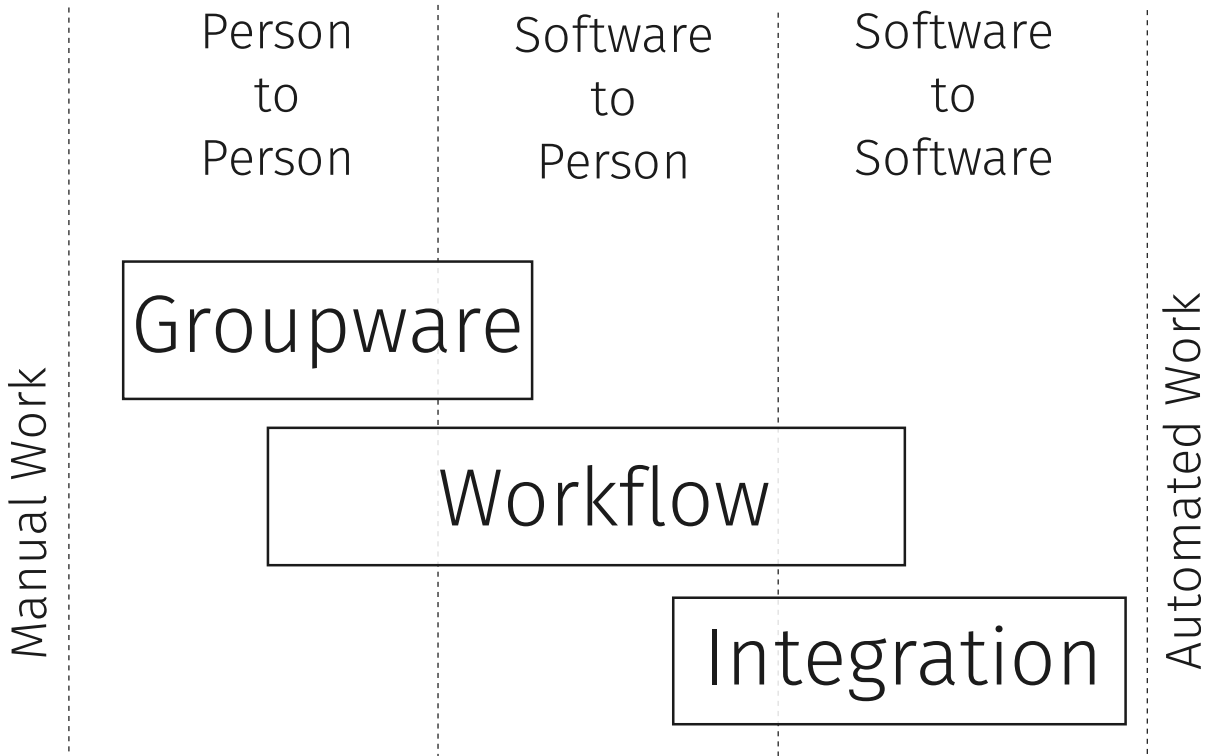

# Business Process Re-Engineering

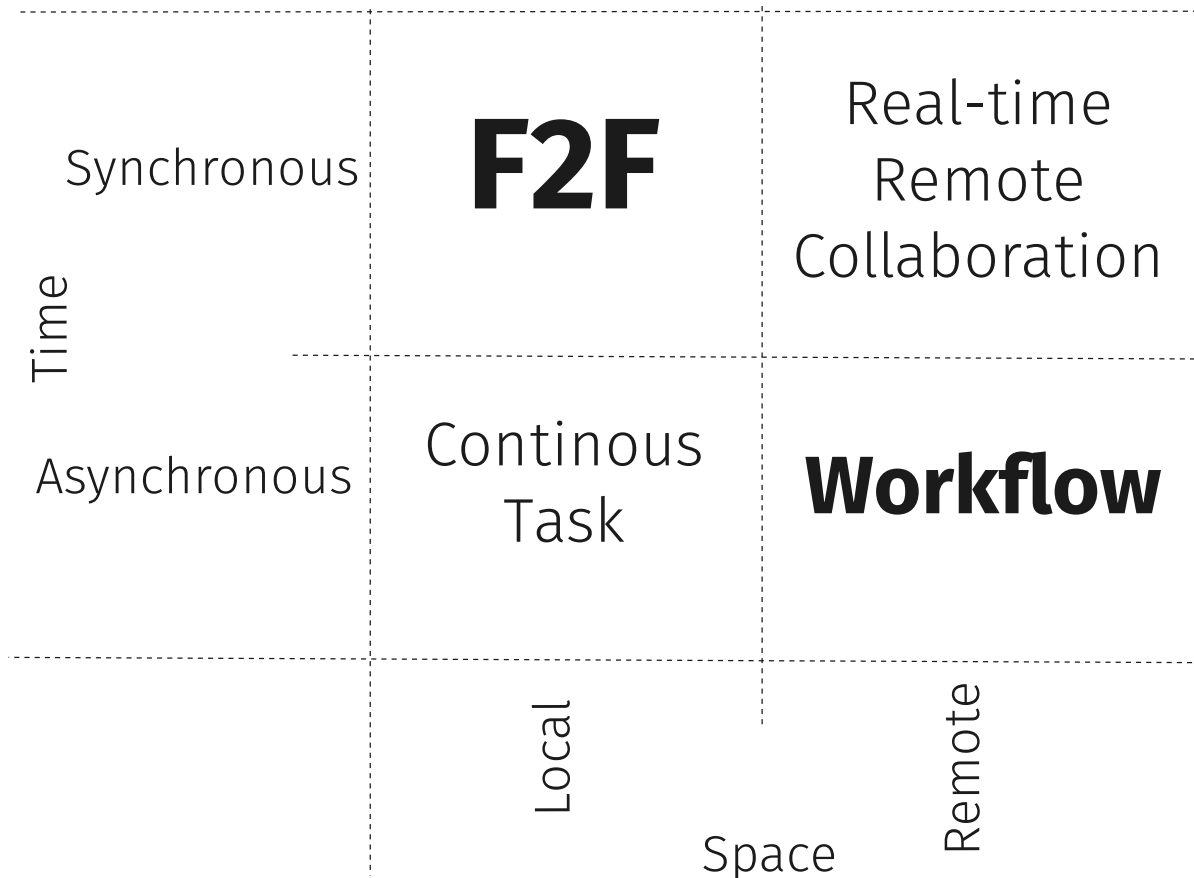

## Continuous Process Improvement

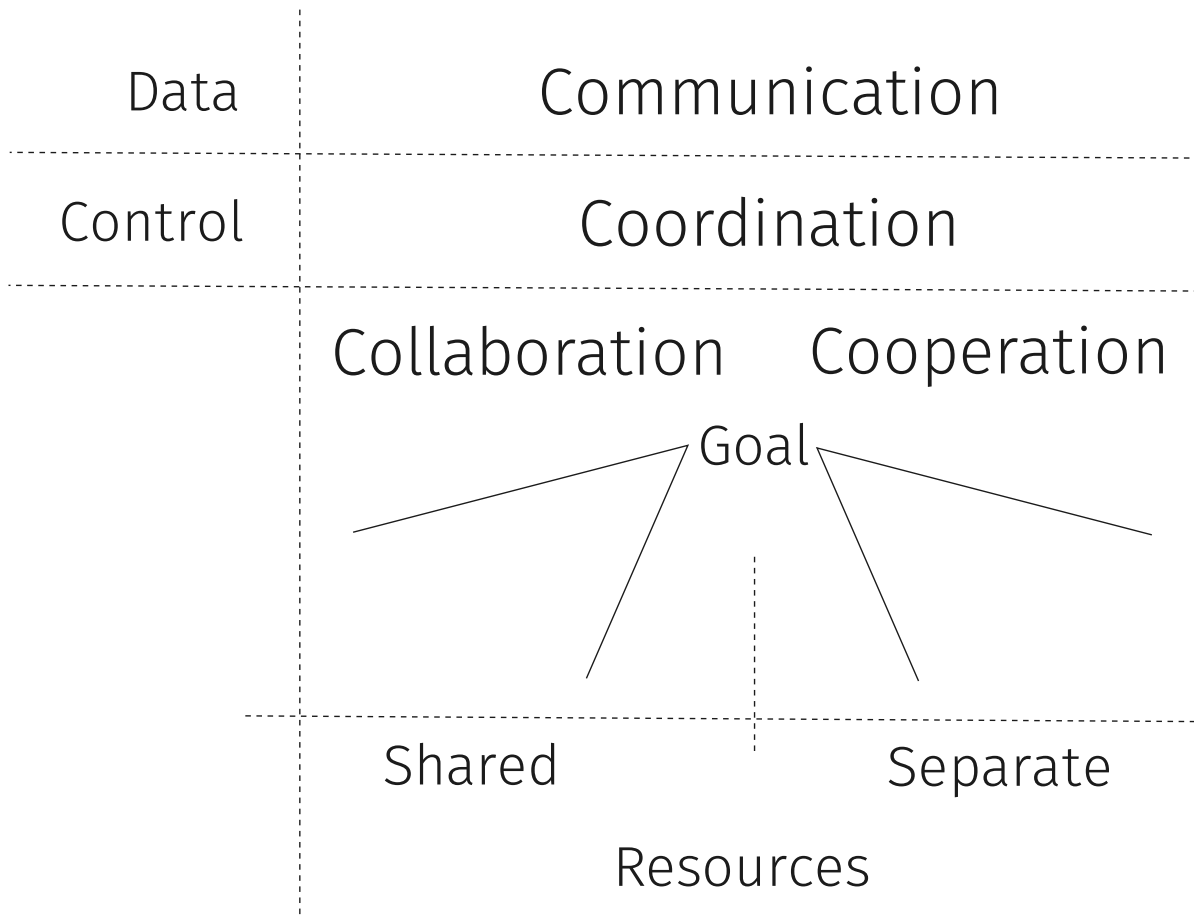

# Automation

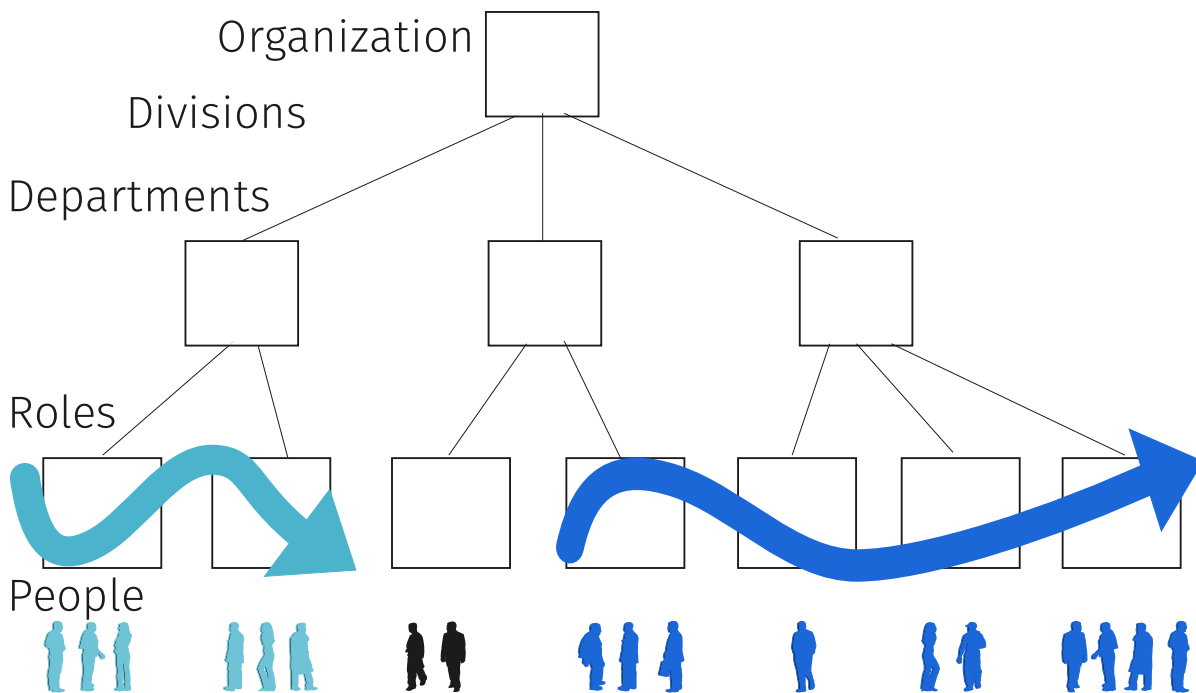

## Groupware (CSCW)

C<sup>4</sup>

# People and Processes

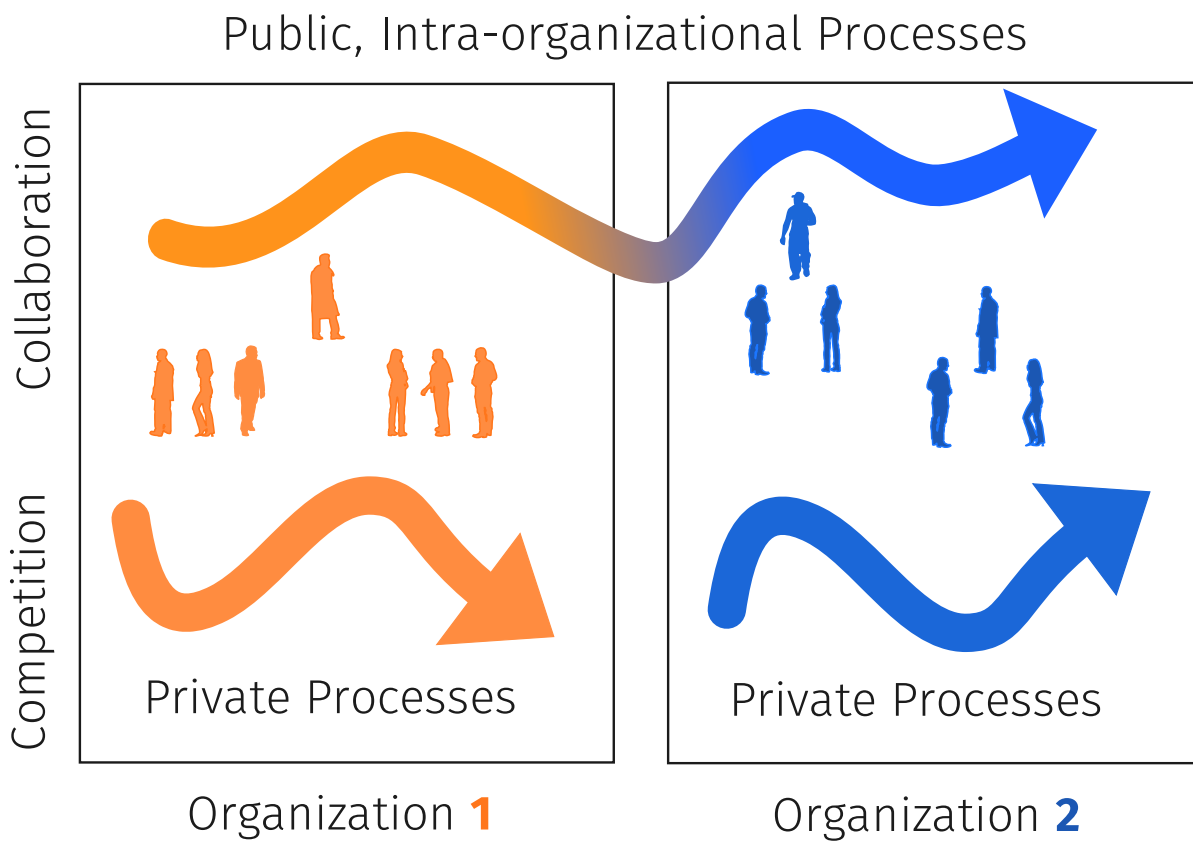

## Roles

Processes encompass one or more roles. Typical roles are hierarchically organized into companies, divisions, departments, functions.

Roles are made of users with a common characteristic: programmers, lawyers, managers, consultants, secretaries, accountants.

They identify a **pool of interchangeable human resources** capable of dealing with a concrete set of tasks.

## Sustainability

Processes and their activities should be defined based on abstract roles

Running processes that depend on the presence and availability of specific individuals is not sustainable, nor scalable

Each process instance should have a **process owner**, who is responsible of its success

# Flexible Processes

Planning	Dynamic	Ad-Hoc Workflow	Flexible Workflow
	Static		Production Workflow
		One	Many
		Repetitions	

20 / 27

21 / 27

## Flexible Workflow

How to deal with unpredictable situations?

The plan can be completed based on knowledge available only after the process has started

How to tailor the process to each customer?

The plan needs to be adjusted based on the process context and initial conditions
